TAKE NOTICE.

The physician will record in his "Record Book" all cases taken sick or wounded during the month. This shall constitute a basis for his Monthly Report, and the cases so entered will not be marked recovered, nor dropped from report unless actually recovered of the disease from which suffering when so entered, but will be carried upon the register as remaining, and so reported in his monthly report. When a patient reported as taken sick of any disease, and still on sick report, dies during a subsequent month of another entirely distinct disease, the death will be entered in the proper column, opposite the name of the disease that was the cause of death; but no new case will be entered to correspond. In filling the first page of this report, enter in the tabular list the names of those diseases only of which there are cases to be reported as remaining from last month, or taken sick and wounded during the month. The nomenclature and order of the statistical nosology, Indian Office memorandum, being strictly observed, except when diseases occur which are not provided for by it. In such cases the physician must state under the head of "Remarks" his reasons for departing from the form. Enter opposite the name of each disease the number of cases remaining, taken sick, &c., using ordinary numerals. No arrangement is made on this blank for reporting secondary diseases or complications. Should these be in any case interesting the facts are to be stated on the third page under the head of "Remarks." The physician is expected to make explanations, and communicate any matters of interest, such as relate to prevailing diseases, sanitary condition of the Indians, healthfulness of the location, peculiarities of the service, &c., and suggest any reforms or changes tending to improve this branch of the service. He will also report from time to time, and especially at the close of the months of March, June, September, and December, the progress made by the Indians in abandoning their own native "Medicine Men," and the increase of confidence in the practice of the agency physician, giving the relative proportion of these two classes. In these reports the physician should further state proportional number of Indians who seek his services of their own accord, and of those whom he seeks for treatment, what proportion he visits at their habitation, and what come to his office or dispensary; and what hospital accommodations there are, or ought to be, and to what extent the Indians would probably avail themselves of the benefits of a hospital. The physician will ascertain as accurately as possible the number of births each month. Violent and accidental deaths will be noted under the head of Remarks in full.

REMARKS AND PHYSICIAN'S SPECIAL REPORT.

Note.

The within report does not show all the cases of Epidemic Catarrhal fever or "La Grippe" present but for, but only those of a more serious character - which reported at the Hospital for treatment.

Remedies were supplied to the girls and boys Quarters, and many of the cases were treated there. These have since been collected and tabulated, and we find we have during the entire Epidemic treated three hundred and seventy four (374) cases. ✓

Of these seventeen (17) terminated in Pneumonia Nineteen (19) in Bronchitis with Phthisical tendencies, one (1) acute Rheumatism - and forty two (42) with other complications - among them quite a number of inflammation of internal ear - followed by Abscess. The only death resulting from this Epidemic was a case of Consumption so far advanced - that the subject was unable to withstand the severity of the attack.

Very Respectfully

Fordyce Grinnell
Physician
