T A K E N O T I C E .

The Physician will record in his "Record Book" all cases taken sick or injured during the month. This shall constitute a basis for his Monthly Report, and the cases so entered will not be marked recovered nor dropped from report unless actually recovered of the disease from which suffering when so entered, but will be carried upon the register as remaining, and so reported in his monthly report, except when treatment has been discontinued for some cause, which must be explained under "Remarks." When a patient reported as taken sick of any disease, and still on sick report, dies during a subsequent month of another entirely distinct disease, the death will be entered in the proper column, opposite the name of the disease that was the cause of death; but no new case will be entered to correspond. In filling the first page of this report, enter in the tabular list the names of those diseases only of which there are cases to be reported as remaining from last month, or taken sick and injured during the month. The nomenclature and order of the statistical nosology, Indian Office memorandum, being strictly observed, except when diseases occur which are not provided for by it. In such cases the physician must state under the head of "Remarks" his reasons for departing from the form. Enter opposite the name of each disease the number of cases remaining, taken sick, etc., using ordinary numerals. No arrangement is made on this blank for reporting secondary diseases or complications. Should these be in any case interesting, the facts are to be stated on the third page under the head of "Remarks." The physician is expected to make explanations, and communicate any matters of interest, such as relate to prevailing diseases, sanitary condition of the Indians, healthfulness of the location, peculiarities of the service, etc., and suggest any reforms or changes tending to improve this branch of the service. He will also report from time to time, and especially at the close of the months of March, June, September, and December, the progress made by the Indians in abandoning their own native "Medicine Men," and the increase of confidence in the practice of the agency physician, giving the relative proportion of these two classes. In these reports the physician should further state proportional number of Indians who seek his services of their own accord, and of those whom he seeks for treatment, what proportion he visits at their habitation, and what come to his office or dispensary; and what hospital accommodations there are or ought to be, and to what extent the Indians would probably avail themselves of the benefits of a hospital. The physician will ascertain as accurately as possible the number of births each month. Violent and accidental deaths will be noted under the head of "Remarks" in full.

REMARKS AND PHYSICIAN'S SPECIAL REPORT.

We began and ended the month with more boys than girls in Hospital. There were admitted however during the month 8 more girls than boys. The average no. of days treated in hospital is for the boys $9\frac{1}{4}$ while for the girls it is only $3\frac{3}{4}$. This is to be accounted for largely by the chronic ^{hospital} cases which at present are all boys. The accident cases ~~to~~ have been among the boys.

HOSPITAL RECORD for the Month ending Dec 31, 1891

DATE OF ADMISSION TO HOSPITAL.	Patients in hospital at date of last report.		Admitted during month.		Total number treated in hospital.		Died.		Discharged.		Patients in hospital at date of this report.		Number of days of hospital treatment given.
